

## What one of our customers have to say about our philosophy:

I wanted to let you know that we have been using our eXpert 5601 system with good results. Although we have not asked it to do many things, it has done everything we have asked without great effort on our part. It is now fully calibrated. I had told the technician that the calibration must show resolution lower than a Newton. He reported back that its resolution was a tiny fraction of a Newton, and he also commented on how easy it had been to calibrate. These services come at an hourly rate, so this is another nice thing about the Admet [machine].

When I scouted out the OEMs for this equipment, yours was the least recognized name on my short list. No one had ever heard of you. The three things that brought you to the top of the list were your low price, the capabilities of your system, and the technical expertise of those I spoke with on the phone. I took a risk on your product because it advertised better features at a lower cost, and your staff was technically convincing. Now I feel completely justified in my decision. Everything you claimed has proven true. I don't know very much about these systems, but the more I learn about the eXpert, the more features I find that the other, more costly equipment did not offer.

We are a start-up manufacturer with limited funds, and I am very glad that we tried you out. It is not very often that you get more for less.
